DETAILED ACTION

Claim Objections

1. Claim 2 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.
2. Claim 2 states that the pad layout of the printed circuit board assembly is offset relative to the pad layout of the area array package. However claim 1 *already claims* that the two pad layouts are offset relative to each other. Furthermore it is unclear as to which layout can be designated the frame of reference if both of them are offset relative to each other; thus leading the examiner to believe that claim 2 fails to further delimit claim 1.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2826

4. Claims 1, 2, 3, and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Caldwell et al. (United States Patent Application Publication US 2004/0026107 A1).

5. In reference to claims 1, 2, and 6, Caldwell et al. (United States Patent Application Publication US 2004/0026107 A1, hereinafter referred to as the "Caldwell" reference) discloses a similar assembly. Figure 4 of Caldwell illustrates a plan view of two pad layout patterns (44, 46) superimposed over each other. The pad layouts (44, 46) are offset with respect to each other. It is understood that the layout patterns shown in figure 4 are applicable to printed circuit boards and area array packages (Summary of the Invention, figures 2a and 5, claim 32). The fabrication process used to form the device of figure 4 inherently meets claim 6.

6. With regard to claim 3, the area array package layout (44 or 46) is in a regular grid pattern.

Allowable Subject Matter

7. Claims 7-9 are allowed.

8. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. The following is a statement of reasons for the indication of allowable subject matter: the examiner is unaware of any prior art which suggests the specific offset pad layout groupings as described by the applicant.
